COLIBRE collaboration policy

Any project that makes use of any of the COLIBRE simulations prior to public release may be designated a COLIBRE project by the board.

Each project has a single project leader who will be responsible for communication with the board and (potential) co-authors. Anyone with sufficient time and expertise can be a project leader.

The start of pilot projects that may eventually result in papers should be communicated to the chair of the board as early as possible, certainly before significant work is done.

Project approval must be obtained from the board.

Project approval may be withdrawn by the board in case of lack of progress, taking into account that junior PhD students may progress more slowly than senior researchers.

The maximum number of projects that may simultaneously be reserved per project leader is generally 1 but can be greater if the board judges multiple projects to be very closely related or in case the project leader is a builder or core member.

Approved projects will be included in the project list accessible to builders and core members.

A dedicated Slack channel will be created for each approved project. Builders and core members will be invited to subscribe and the board may also invite others working on related projects to join. Project leaders can also ask for collaborators to be invited. Project leaders are expected to use Slack to provide updates, ask questions, and post preliminary results.

Any manuscript, both refereed and non-refereed, reporting results from a COLIBRE project is subject to the COLIBRE publication policy.

Any simulation that makes use of the COLIBRE model may be designated a COLIBRE spin off project by the board. Unless the board decides otherwise, membership of spin off projects should be offered to builders. The board and the spin off project leader(s) should come to an agreement about what membership entails.

COLIBRE publication policy

Any manuscript, both refereed and non-refereed, reporting results from a COLIBRE project is subject to the COLIBRE publication policy.

Manuscripts may only be circulated if the project on which they report has been approved by the board.

Authorship must be offered to:

1. Researchers who have made sufficient direct contributions, as judged by the project leader;
2. Builders if the first author has not yet contributed 2 first author papers;
3. Core members if the first author has not yet contributed 1 first author paper;
4. Members for the first 2 COLIBRE papers.

The board may in addition request that particular researchers, who are not builders but who have made significant, indirect contributions that are specifically relevant to the paper at hand, be offered co-authorship.

Co-authorship will be granted if

1. It has been offered
2. and it has been accepted (i.e. opt in)
3. and it is clear the co-author has read the manuscript (either through their comments or through their explicit confirmation)

Authors are ordered according to their direct contributions to the specific project, as judged by the project leader. Authors who contributed only indirectly are listed after those who have made direct contributions and ordered first according to membership category and within the category alphabetically.

Until the authorship has become definite, i.e. until the final draft of the manuscript has been circulated, the authors should be listed as “[Name of first author] et al.” or, in the case a senior researcher co-wrote the manuscript, as “[A, B,] et al.”

COLIBRE membership

Membership status is determined by the board based on a) the amount of COLIBRE-specific groundwork performed; b) influence on the project; c) continuing engagement with the project.

After submission of papers I and II, the term “member” may be used by anyone working with the COLIBRE team on COLIBRE projects.

Category	Benefits
Builder	● Co-author of everyone’s first two 1st author papers (until public data release) ● First choice for paper projects/spin offs ● Invited to contribute directly to paper projects (via Slack) ● Membership of spin off projects
Core member	● Co-author of everyone’s first 1st author paper (until public data release) ● Second choice for paper projects/spin offs ● Invited to contribute directly to paper projects (via Slack)
Member	● Co-author of papers I and II ● Third choice for paper projects/spin offs
